This program suite may be used and distributed freely, subject to the following conditions:-

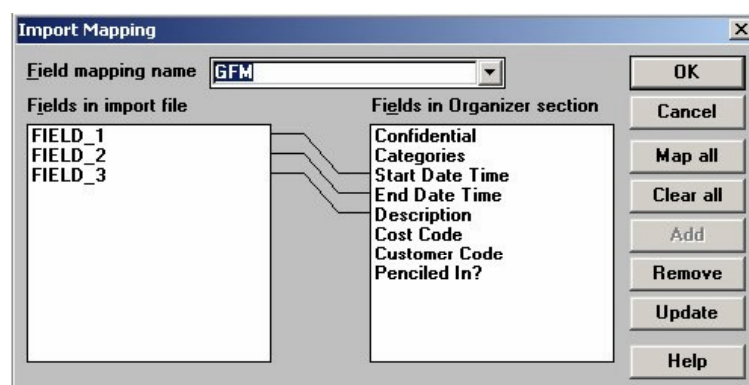

1. The program may only be distributed as part of the entire zip file archive
2. The attribution and copyright at line 2 of the listing shall be retained
3. No responsibility for the reliability of the programs is implied and they are edited and used at your own risk

Many users of the Psion Organiser II went on to use the Series 3. Whilst it was possible to convert data files (such as address books) to Series 3 format, no provision exists to convert the Organiser II diary to a Series 3 agenda. However, it is possible to convert a Lotus Organiser 2 diary to a Series 3 agenda.

This OPL routine was therefore written to locate the saved Organiser II diary (saved as DIARY.ODB) on any of the devices (A:, B: or C:) and convert each entry into Lotus format. The converted entry is then written directly to the PC's hard disk. A progress indicator is included.

Line 27 of the OPL code contains the DOS path for the PC file, which you can edit to suit your PC's configuration.

Finally, it will be necessary to use the "mapping" function in the Lotus import menu to get the diary fields to match.

Once saved, the Lotus file can be copied and converted to the Series 3, using PsiWin v1.1
